

Paul Kinahan, is a Professor of Radiology, adjunct Electrical Engineering and Bioengineering, at the University of Washington in Seattle. He is director of PET/CT physics at the University of Washington Medical Center. He received his PhD from the University of Pennsylvania in 1994 in Bioengineering and became an Assistant Professor at the University of Pittsburgh. While there he was part of the group that built the first prototype combined positron emission tomography / x-ray computed tomography (PET/CT) scanner. He moved to the University of Washington in 2001. His research interests include quantitative imaging with PET/CT, objective assessment of image quality and image reconstruction algorithms. Recent areas of interest include the application of imaging technology to assessing response to therapy and to drug discovery and clinical trials. He has been a member of and/or chaired several grant review panels and national committees on medical imaging. His awards include the IEEE Nuclear Medicine Imaging Science Council Young Investigator Award and an NIH FIRST award. He has been the principle investigator on 15 research grants. Currently he is a member of the Science Council of the American Association of Physicists in Medicine and president of the American Board of Science in Nuclear Medicine.
