

Daniel L. Rubin, MD, MS is Assistant Professor in the Department of Radiology at Stanford University. His NIH-funded research program focuses on the intersection of biomedical informatics and imaging science, developing computational methods and applications to access and integrate diverse clinical and imaging data, to extract quantitative information and meaning from images, to enable data mining and discovery of image biomarkers, and to translate these methods into practice through applications that will improve diagnostic accuracy and clinical effectiveness. Dr. Rubin is PI of one of the centers in the National Cancer Institute's recently-established Quantitative Imaging Network (QIN), in which his group is developing informatics methods and infrastructure for computerized quantitative imaging assessment of tumor burden.

Dr. Rubin is a member of the Radiology Informatics Committee of the Radiological Society of North America (RSNA), and is Chair of the RadLex Steering Committee of RSNA, a project to develop a standard comprehensive terminology for radiology. He is also Chair of the Informatics Committee of the American College of Radiology Imaging Network (ACRIN), and Co-Chair of the Medical Imaging Systems Working Group of the American Medical Informatics Association. Dr. Rubin has published over 100 scientific publications in imaging informatics and Radiology.
